Summary I'm a full-stack developer passionate about creating the unimaginable, something that is not common. My stack goes beyond MERN—spanning Next.js, Redis caching, Three.js, and more. I'm also exploring ML (just getting started with them trees) while sharpening my problem-solving through LeetCode in C++. With experience across C++, Java, Verilog, Linux & IoT, I enjoy exploring everything the world has to give.

Experience

HackerRank Campus Crew Technical Associate Lead	September 2025
